

KYLE ANDRE C. ABAD

Computer Engineering Student/Graphic Designer

Tagbilaran City, Bohol, Philippines | 0991 662 9131 | kyleandre689@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Fourth-year Bachelor of Science in Computer Engineering student with hands-on experience in graphic design through an internship at Pedi App. Experienced in creating social media graphics and promotional materials while following brand guidelines and incorporating feedback. Academic project experience includes mobile development, machine learning and computer vision, robotics, embedded systems, and hardware prototyping.

EXPERIENCE

Pedi App

Graphic Design Intern

Bohol, Philippines
May 2026 – July 2026

- Designed social media graphics, promotional materials, flyers, and other marketing assets based on creative briefs and company branding guidelines.
- Created and revised promotional materials for Pedi App services and campaigns, including Pedi Moto, Pedi Xpress, Pedicab, and Pedi Events.
- Developed promotional designs for events and marketing campaigns, including social media materials for the Pink Run.
- Applied supervisor feedback to improve typography, composition, visual hierarchy, color consistency, and overall brand alignment.
- Strengthened practical skills in Adobe Illustrator and Photoshop while contributing design concepts and social media content ideas for company campaigns.

EDUCATION

Bohol Island State University – Main Campus

Bachelor of Science in Computer Engineering

Bohol, Philippines
2023 – Present

TECHNICAL SKILLS

Programming: C/C++, Python (Basic)

Mobile Development: Flutter (Project Experience)

Embedded Systems: Arduino, Basic Sensor & Component Integration

Electronics & Hardware: Circuit Design, PCB Design & Manual Etching, Soldering, Hardware Prototyping

AI & Machine Learning: CNN Image Classification, TensorFlow/Keras, TensorFlow Lite (Project Experience)

Design Tools: Adobe Illustrator, Adobe Photoshop (Basic), Canva, Figma (Basic)

ACADEMIC PROJECTS

AquaSight

Mobile-Based Water Clarity Classification System

Developed a Flutter-based mobile application using MobileNetV2 transfer learning to classify water images as clear, cloudy, or murky. Created a custom dataset, trained and evaluated the model, and deployed it using TensorFlow Lite for offline inference, achieving 95.83% test accuracy under controlled conditions.

Technologies: Python, TensorFlow/Keras, MobileNetV2, TensorFlow Lite, Flutter

McClaw

Dual-Hand Motion-Controlled Mobile Robotic Arm (Team Project)

Collaborated on the development of a gesture-controlled mobile robotic arm using Arduino microcontrollers, motion sensors, and wireless communication. Contributed to integrating the hardware and control system for robot navigation and intended robotic arm and claw operation.

Technologies: Arduino, MPU6050, NRF24L01, Flex Sensor, Servo Motors, L298N Motor Driver

SpeakWrite

Speech-to-Text Mobile Application

Developed a React Native mobile application for recording or importing audio and video files and converting spoken content into editable text. Implemented media recording and playback, speech-to-text transcription, file management, text editing, and document export functionality.

Technologies: React Native, JavaScript, Speech-to-Text Integration

ADDITIONAL SKILLS

Team Collaboration • Adaptability • Problem Solving • Attention to Detail • Receptive to Feedback
